PUDU MP2000

MP2000: Born for Pallet Handling

Intelligent Floor-to-Floor Pallet Handling AMR

Focusing on floor-to-floor transport, turning complex project-based unmanned pallet jack capabilities into a standardized product that can be replicated easily and quickly.

Target customers: Express Logistics, E-commerce Warehousing, Manufacturing.

Scenarios: Loading Docks, Warehouses, Line-side Storage, Production Workshops.

Tasks: Point-to-Point, Point-to-Area, and Area-to-Area Transport.

Value: Faster Deployment, Higher Throughput, Less Manual Intervention.

Six Capabilities for an Autonomous Logistics Loop

Plug-and-Play

3D SLAM · Onboard Intelligence · Mapping in Minutes

Fleet Orchestration

Autonomous Decisions · Offline Multi-Robot Coordination

Omni-Sense Safety

Multi-Sensor Suite · Stop-and-Avoid / Detours · Proactive Alerts

AI-Native Autonomy

AI Self-Learning · Dynamic Storage Locations · Load Profile Measurement

20s Fork Insertion

20s Fork Entry · 1.6 m/s

IoT Integration

IoT Expansion · Flexible Auto/Manual Switching

Key Components: Safety Operation

Key Components: Intelligent Operation

Wheel

Key Components: Flexible Charging

Key Specs: 2 t Pallet Transport

 Payload 2000 kg 	 Fork Entry 20 s 	 Unloaded / Loaded Speed 1.6 / 1.2 m/s	 Operating Endurance Up to 12 h 
 Deployment Speed Minutes 	 Fork Lifting Height Range 80-200 mm	 Fork Outer Width (2 SKUs Available) 550 / 620 mm	 15° Max. Pallet Offset / Angular Deviation 15 cm/15° 
 Min. Straight Aisle Width (Unloaded) 1.1 m 	 Right-angle Stacking Aisle Width 2.0 m 	 Threshold / Gap Crossing 10/35 mm	 Gradeability Loaded / Unloaded 3°/8°

Specifications subject to the jointly confirmed highlights matrix and parameter sheet.

MP2000 Detailed Specifications

PRODUCT SPECIFICATIONS

Basic Specs	Overall dimensions	1585 x 910 x 1870 mm	Safety Specs	Laser obstacle avoidance	Front dual LiDARs
	Overall weight	420 kg		3D obstacle avoidance	3D LiDAR-based obstacle avoidance
	Max. load	2000 kg		Bumper detection	Available
	Max. lift height	200±5 mm		Pallet position detection	Available
	Lowered fork height	80±5 mm		Emergency stop button	Available
	Turning radius	1350 mm		Warning light	Available
	Right-angle stacking aisle width	≤2000 mm, 1200*1000 mm Pallet (1200 along forks) ≤1960 mm, 1200*800 mm Pallet (1200 along forks)		Outline light	Available
	Fork dimensions (L × W × H)	1130 x 160 x 60 mm		Fork-tine safety protection	Fork-tip laser
	Fork outer width	620 mm (24.41 inches)		Audible and visual alarm	Available
	Navigation method	3D LiDAR-SLAM, VSLAM		Voice module	Optional add-on
	Operating environment	Temperature: 0 °C to 45 °C; humidity: ≤ 85% RH	Battery Specs	Nominal voltage	DC 51.2 V
	Storage environment	Temperature: -20 °C to 60 °C; humidity: ≤ 85% RH		Rated capacity	54.9 Ah
	Road surface requirements	Indoor environment with flat, smooth surfaces		Charging method	Automatic/Manual
	Pallet misalignment tolerance	≤15°		Charging time	About 2 h, input voltage 200V~240Vac About 3.2h, input voltage 100V~120Vac
Operating Performance	Max. speed	1.2 / 1.6 m/s (Loaded/Unloaded)		Battery life	12 h (None load); 6 h (Max. load)
	Max. surmountable height	10 mm			
	Max. surmountable gap	35 mm			
	Gradeability	3°/ 8° (Full Load/Unloaded)			

MP2000 Detailed Specifications

PRODUCT SPECIFICATIONS

Basic Specs	Overall dimensions	62.40 x 35.83 x 73.62 inches	Safety Specs	Laser obstacle avoidance	Front dual LiDARs
	Overall weight	925.94 lbs		3D obstacle avoidance	3D LiDAR-based obstacle avoidance
	Max. load	4409.25 lbs		Bumper detection	Available
	Max. lift height	7.87±0.20 inches		Pallet position detection	Available
	Lowered fork height	3.15±0.20 inches		Emergency stop button	Available
	Turning radius	53.15inches		Warning light	Available
	Right-angle stacking aisle width	≤78.74 inches, 48*40 inches Pallet (48 along forks) ≤77.17 inches, 48*31.5 inches Pallet (48 along forks)		Outline light	Available
	Fork dimensions (L × W × H)	44.49 x 6.30 x 2.36 inches		Fork-tine safety protection	Fork-tip laser
	Fork outer width	550 mm (21.65 inches)		Audible and visual alarm	Available
	Navigation method	3D LiDAR-SLAM, VSLAM		Voice module	Optional add-on
	Operating environment	Temperature: 0 °C to 45 °C; humidity: ≤ 85% RH	Battery Specs	Nominal voltage	DC 51.2 V
	Storage environment	Temperature: -20 °C to 60 °C; humidity: ≤ 85% RH		Rated capacity	54.9 Ah
	Road surface requirements	Indoor environment with flat, smooth surfaces		Charging method	Automatic/Manual
	Pallet misalignment tolerance	≤15°		Charging time	About 2 h, input voltage 200V~240Vac About 3.2h, input voltage 100V~120Vac
				Battery life	12 h (None load); 6 h (Max. load)
Operating Performance	Max. speed	2.7 / 3.6 mph (Loaded/Unloaded)			
	Max. surmountable height	0.39 inches			
	Max. surmountable gap	1.38 inches			
	Gradeability	3°/ 8° (Full Load/Unloaded)

Product Applications

About PUDU

Product Highlights

From Rapid Deployment to All-Around Safety

True Automation Does More Than Move

Perceive

Decide

Execute

Collaborate

Plug-and-Play

No Site Retrofit. No Platform Dependency.
Intelligence Goes Straight to Work.

3D SLAM

Vision & 3D LiDAR
Positioning

Zero Retrofit

No Reflectors or Floor Markers Needed

Edge-side Closed Loop

Each Robot Completes Core
Tasks Independently

Self-Learning AI for Versatile Load Carrier Compatibility

Three-runner & Perimeter-base Pallets

Custom Load Carriers

AI Storage Detection, Seamless Pallet Handling

Automatically detects slot availability and pallet positions, then selects the optimal pickup or drop-off point and plans the route for fully autonomous handling.

Adaptive Alignment, Precise Fork Engagement

No manual realignment required. PUDU MP2000 detects the load carrier's position and angle, then automatically adjusts its fork-entry path.

It handles offsets of **up to 15 cm** and angular deviations of **up to 15°**, ensuring precise, reliable pickup even in complex environments.

15 cm / 15°

Offset / Deviation Tolerance

Intelligent Clearance Assessment

Detects load dimensions and contours to calculate the space required for safe passage in real time. Handles thresholds **up to 10 mm** and gaps **up to 35 mm** in complex environments.

**AI-Powered Load Detection
and Clearance Assessment for
Smarter, Safer Navigation**

Fleet Orchestration

No network or server required,
enabling multiple devices to collaborate
autonomously on site.

Intelligent Traffic Zone Control

Autonomous Planning and Traffic Scheduling

Distributed Autonomous Collaboration

No Network or Server Prerequisites

20s Fork Insertion

Shorten Every Pickup.
Extend Every Productive Day.

20 s

Complete Fork Entry

1.6 / 1.2 m/s

Unloaded / Loaded Speed

More Storage in Narrow Aisles

Handles 90° pallet pickup in aisles **as narrow as 2 m**, with pallet spacing down **to 15 cm**. Maximizes storage space and supports business growth without facility expansion.

**Right-Angle Pickup in
2 m Aisles, Agile in Tight Spaces**

2.0 m

Right-Angle Stacking Aisle Width

Omni-Sense Safety

Continuously detects personnel, vehicles, loads, and obstacles, enabling risk-based driving decisions.

360°

Multi-Sensor Protection

Reroutes Around Static Obstacles, Stops for Moving Ones

Full 3D Spatial Awareness

Audible and Visual Alerts

Clear, At-a-Glance Status

IoT Integrations

PUDU Link

PUDU Pager

**Elevator
Control Module**

**Automatic
Door Control**

**Auto-charging
Station**

Send tasks via **PUDU Link**, **APIs** or **task Pager** across mobile, system and site endpoints. Integrate elevator control, pagers and other IoT accessories as needed.

Flexible Task Dispatch Methods for Every Need

PUDU Link

Connect the PUDU Link app to dispatch tasks directly

Minutes

Robot Screen Trigger

One-tap task trigger on the robot screen

Minutes

PUDU Pager

IoT Module

Hours

PDA Scan

Scan with a PDA using slot information to dispatch tasks

< 1 Day

API Dispatch

Open API Interface

1-2 Months

Flexible Dual-Mode Operation

Seamlessly switches between autonomous and manual modes, handling routine tasks independently while allowing operator assistance when needed for reliable, continuous operations.

Manual Mode

Autonomous Mode

Six Capabilities Deliver Three Outcomes

Faster Deployment

No Site Retrofit

Onboard Intelligence Loop

Rapid Mapping and storehouse building

More Reliable Operations

Autonomous localization and obstacle avoidance

Offline Fleet Collaboration

Human-machine Dual Control

Higher Throughput

20-second Fork Entry

High-speed Heavy-load Transport

24/7 Energy Management

Product Applications

Transport Modes · Typical Scenarios · PISTF

Three Pick-and-place Environments

Single-Point Pick & Place

Bin Location Pick & Place

Grid-Based Pick & Place

Single-point Pick & Place: Accommodates pallet misalignment, Reliable in Narrow Aisles

Pain points : Inconsistent manual operations lead to significant placement deviations.

Industry Average: Tolerates 5 cm offset and 5° deviation.

PUDU Advantage: Tolerates **15 cm lateral offset** and **15° angular deviation** for reliable fork entry without repeated pallet adjustment.

Pain points: Early site planning leaves insufficient aisle clearance.

Industry Average: Detour through wider aisles when faced with narrow passages.

PUDU Advantage: **2.0 m right-angle stacking aisle** and **1.1 m unloaded passability** for stable operation in tight spaces.

Bin Location Pick & Place: Multi-carrier Compatibility and Active Obstacle Avoidance

Pain points: Mixed pallet types and sizes across upstream and downstream operations.

Industry Average: Relies on standardized pallet specifications, with limited compatibility.

PUDU Advantage: Compatible with **three-Runner Pallet and Perimeter-base pallets**; **AI self-learning** adapts to diverse load carriers and reduces retrofit costs.

Pain points: Unstructured operations leave temporarily stored goods blocking aisles.

Industry Average: Stops in place for static obstacles, causing route blockage and task delays.

PUDU Advantage: 3D and 2D LiDAR identify static obstacles and route around them autonomously.

Pain points: Manual inventory checks, cargo inspection, and human-vehicle safety monitoring.

Industry Average: Limited ability to identify unexpected personnel, forklifts, and other dynamic hazards.

PUDU Advantage: Multi-sensor recognition enables proactive avoidance and clear status alerts for safer operations.

Grid-Based Pick & Place: Detect Occupancy and Automatically Selects Target Locations

Pain points: Storage-location setup is time-consuming.

Industry Average: Locations must be manually measured, entered, and labeled.

PUDU Advantage: Scan the start & end of a storage-location group to generate location data automatically, reducing setup time **by 80%**.

Pain points: Limited on-device intelligence requires complex systems to monitor location status.

Industry Average: Ceiling cameras and a central control system assign pick-and-place points.

PUDU Advantage: On-device **AI identifies location occupancy**, locks target locations, plans routes, and reports status autonomously, reducing implementation complexity and investment costs.

Four Core Transport Modes Cover Major Pallet-handling Tasks

Point → Point

Precise Transport Between Fixed Workstations

Precise Positioning

Fixed Route

Safe and Reliable

Point → Area

Workstation to Buffer

From Workstation

Autonomous Navigation

Buffer Transfer

Area → Point

Replenish the production line from a staging area

Pick Up from Staging

Route Planning

Line Delivery

Area → Area

Batch circulation across zones

Cross-zone Scheduling

Batch Transport

Efficient Turnover

Industrial Scenario: Connect Logistics Before and After the Line

 Zone Layout  MP2000 Logistics Coverage

Note: Inbound/outbound coverage includes floor storage and first-level racking only.

Warehousing Scenario: End-to-end Inbound and Outbound Coverage

 Zone Layout  MP2000 Logistics Coverage

Note: Inbound/outbound coverage includes floor storage and first-level racking only.

Express Logistics: Cross-Zone, Long-Distance, Continuous Batch Transport

Subsector: Distribution Center

Unloading -> Buffer -> Sort
-> Consolidate -> Dispatch
-> Loading

Subsector: Transfer Center

Arrival -> Buffer ->
Transfer -> Dispatch
-> Loading

Industry:
Logistics – Express Delivery

Average Daily Pallet Throughput:
3,000-5,000+

Task: Horizontal transport

Painpoints: Peak-volume concentration, tight time windows, continuous shifts, complex routes, frequent short-distance replenishment, cross-zone transfers, labor shortages, and mixed pedestrian-vehicle traffic.

2-ton Transport

Handles full pallets and supports high-volume peak transfers.

Fast Response

20-second fork entry supports frequent replenishment, consolidation, and cross-zone transport.

Continuous Operation

Charger scheduling and up to 12 hours of runtime.

Safer Operations

Automates repetitive horizontal transport, detours around static obstacles, and proactively avoids people and vehicles.

E-Commerce Warehousing: Connecting Inbound, Picking, Checking, and Outbound

Scenario: Receiving and staging area, first-level high-bay rack locations, pre-pick staging area, and outbound consolidation area.

Industry:
E-Commerce Warehousing

Average Daily Pallet Throughput:
350-1,200

Tasks: Full-pallet putaway, internal pallet transfers, picking replenishment, and outbound consolidation.

Painpoint: Order-volume fluctuations, frequent location changes, delayed replenishment, long cross-zone travel, narrow aisles, and mixed pedestrian-vehicle traffic.

Higher storage density

Requires only a 2.0 m right-angle stacking aisle and can travel through 1.1 m aisles unloaded.

Fast Pick & Place

20-second fork entry supports frequent replenishment and storage tasks.

Continuous wave processing

2-ton payload and up to 12 hours of runtime ensure uninterrupted heavy-load transport.

Lower implementation cost

Intelligent warehouse setup and location occupancy detection reduce construction and infrastructure investment.

Manufacturing: Inter-Plant Transport Synced to Production Rhythm

Scenario: Raw material warehouse, line-side warehouse, packaging area, finished goods warehouse, and shipping dock.

Industry:
Manufacturing

Average Daily Pallet Throughput:
200-800

Tasks: Raw-material distribution, line-side replenishment, process transfer, finished-goods putaway, and shipping handoff.

Painpoint: Rigid production schedules, diverse carrier sizes and transfer points, line-side shortages, multi-point delivery, process bottlenecks, cross-zone shuttling, and mixed traffic.

Continuous heavy-load supply

2-ton payload supports bulk delivery of raw materials, packaging materials, semi-finished goods, and finished products.

Fast delivery response

Stable fork entry in approximately 20 seconds supports frequent material replenishment and process transfers.

Compatibility with diverse load carriers

Supports three-Runner Pallet and Perimeter-base pallets, tolerates 15 cm / 15° deviations, and uses AI to adapt to various carriers.

Mixed-traffic Safety

Autonomously detours around static obstacles and proactively stops or avoids moving personnel and vehicles.

About PUDU

About PUDU

Pudu Robotics, a **global leader in the commercial service robotics sector**, is dedicated to empowering easier work and better lives through AI and robotics, with a vision of building a global intelligent robotics infrastructure that serves 10 billion people worldwide. Pudu Robotics has developed key core technologies and components, including robotic joint modules and motion controllers, and has filed more than 1,900 patent applications worldwide. Built on three core technologies—**Embodied Navigation, Embodied Manipulation, and Embodied Interaction**—Pudu Robotics has pioneered an **"One Brain, Multiple Embodiments"** architecture, establishing a comprehensive product portfolio that includes **specialized, semi-humanoid, and humanoid robots**. Currently, Pudu offers four major product lines: **service delivery, commercial cleaning, industrial delivery and general embodied AI**. Its solutions are widely deployed across industries such as **retail, hospitality, manufacturing, real estate and property services, healthcare, entertainment and sport, education, and public services**. To date, Pudu Robotics has **shipped over 130,000 units** globally, with a presence in **more than 85 countries and regions**.
